

Carrier

Sunshine Hospital, Melbourne, Australia

Providing chiller rental solutions
for uninterrupted operations

BACKGROUND

The customer operates the only MRI machine in the suburbs where it is located. With the existing chiller experiencing multiple malfunctions and failures, it became critical for the hospital to maintain optimal operating conditions for the MRI machine and support patient needs.

TECHNOLOGIES AND SOLUTIONS

To address this urgent need, a customized rental solution was proposed:

- The setup included a 30RQ100 Chiller, buffer tank, strainer, check valve and pipework that were connected to CHW takeoffs
- This maintained the chilled water conditions for continuous operation of the MRI machine
- Additionally, the installation was completed within 8 hours to prevent any disruption to hospital operations

Through this solution, Carrier Rental Services ensured the hospital could continue its essential operations without any interruptions.
